

CODE: Z01

DEGREE OF ERROR: FATAL

MESSAGE: NON-MATCH ERROR

DESCRIPTION OF ERROR: An input error correction transaction must match a specific error record, a batch group of error file records, or must release the entire contents of the error file. If neither of these events occur, a Z01 error code will result.

SYSTEM ACTION: Invalid error correction transactions entered into the error correction subsystem are purged by the system.

ACTION REQUIRED: Recode and resubmit an error correction transaction to release the desired accounting transactions. If the transaction has already been released, no further action is necessary.

---

CODE: Z02

DEGREE OF ERROR: FATAL

MESSAGE: INVAL DEL AND REL

DESCRIPTION OF ERROR: A transaction on the error correction file cannot be deleted as part of a group and released as an individual transaction. If this situation occurs, a Z02 error code will result.

SYSTEM ACTION: Invalid error correction transactions entered into the error correction subsystem are purged by the system.

ACTION REQUIRED: Recode and resubmit an error correction transaction to release or delete (but not both) the desired accounting transaction.

CODE: Z04

DEGREE OF ERROR: FATAL

MESSAGE: CORR ELEMENT ERROR

DESCRIPTION OF ERROR: If the data element name entered on the error correction transaction does not match a data element name on the D52 subtable, a Z04 error will result.

SYSTEM ACTION: Invalid error correction transactions entered into the error correction subsystem are purged by the system.

ACTION REQUIRED: Recode and resubmit an error correction transaction with the correct data element name. If the transaction has already been released, no further action is necessary.

---

CODE: Z05

DEGREE OF ERROR: FATAL

MESSAGE: CORR LEVEL ERROR

DESCRIPTION OF ERROR: In order to correct an individual transaction on the error correction file, the correction element level must equal 'D'. If this situation does not exist, a Z05 error will result.

SYSTEM ACTION: Invalid error correction transactions entered in the error correction subsystem are purged by the system.

ACTION REQUIRED: Recode and resubmit an error correction transaction with a correction element level of 'D' to release the desired accounting transaction. If the transaction has already been released, no further action is necessary.

CODE: Z06

DEGREE OF ERROR: FATAL

MESSAGE: SEQUENCE ERROR

DESCRIPTION OF ERROR: In order to correct transactions on a batch, header, or group level, the correction element level must be 'B', 'G', or 'H'. If this situation does not exist, a Z06 error will result.

SYSTEM ACTION: Invalid correction transactions entered into the error correction subsystem are purged by the system.

ACTION REQUIRED: Recode and resubmit an error correction transaction with a correction element level of 'B' (batch), 'G' (group), or 'H' (header) to release the desired transaction(s). If the transaction(s) have already been released, no further action is necessary.
