Definitions

- (A) **Master Street Address Guide** - Represents corrections made to street records including, street names, address ranges, MSAG Communities and ESNs.
- (B) **Telephone Number Change Request** - Represents address corrections on a specific TN or group of TNs. These "invalid" TNs usually have an associated ESN 199 attached to them which indicates the need for validation.
- (C) **Automatic Location Information Discrepancy Record** - Represents an address discrepancy discovered during a live 9-1-1 call, from a landline. These record corrections are treated with a higher priority and should be processed within 48 hours as a general guideline.
- (D) **Voice over Internet Protocol Discrepancy Record** - Represents an address discrepancy discovered during a live 9-1-1 call, from a VoIP phone. These record corrections are treated with a higher priority and should be processed within 72 hours as a general guideline per Time Warner Operations Center. MSR tracking effective April 2014.

Oahu Civilian E9-1-1 Status Report

September 1, 2017 - September 30, 2017

OAHU CIVILIAN MSAG CURRENT MONTH NOTES:

A total of **164** MSAG transactions were processed in 9-1-1 Net during the current reporting month. Eighteen requests were processed relating to the MSAG database which include: changes to high – low street ranges, combining street records, deletion of invalid records, splitting street records to align with Police, Fire, EMS and Military response areas, and inserting new MSAG records.

There were **3,208** customer ANI/ALI (telephone/address) records updated as a direct result.

OAHU CIVILIAN TELEPHONE RECORD (ALI) TRANSACTIONS CURRENT MONTH NOTES:

145 Telephone Number Change Requests (TN CR) transactions were processed in 9-1-1 Net with valid MSAG addresses, as a result of the ESN 199 clean-up effort. ESN 199 TN CRs must be validated against HT records and approved by the end user Hawaiian Telcom customer before updating the ALI record. One VoIP DR was submitted as the result of a 9-1-1 call from a resident in Kalihi.

OAHU CIVILIAN OPEN TELEPHONE RECORD (ALI) DISCREPANCY STATUS:

- **There are no Open ALI-DRs as of September 30, 2017**
- **There are no Open ALI-DRs as of September 30, 2017**
- **There is no Open VoIP DRs as of September 30, 2017**

Oahu Civilian E9-1-1 Status Report

September 1, 2017 - September 30, 2017

TNCR (TELEPHONE NUMBER CHANGE REQUEST) CURRENT STATUS – SEPTEMBER, 2017

NOTE:

- 9-1-1 NET is a secure web-based application that provides access to request changes to the MSAG, ALI, TN, and ESN/ELT data supported and maintained by West Safety Services for the Telephone Company (TelCo).
- TNCRs are not requests to change Telephone Numbers (TNs); however, it is a corrective process within 9-1-1 NET to modify location information associated with an Automatic Location Identification (ALI) record to a valid MSAG address for 9-1-1 purposes.

PSAP 9-1-1 Telephone Number Location Change Request (Telephone Number Change Request (TNCR) Status)				
PSAP	TOTAL TNCR RECORDS SUBMITTED BY AKIMEKA	OPENED TNCRS PENDING FURTHER ACTION BY WEST SAFETY SERVICES (INTRADO)	OPENED TNCRS REFERRED TO TELCO BY WEST SAFETY SERVICES (INTRADO)	TOTAL UNOPENED TNCR RECORDS
OAHU CIVILIAN	0	0	0	0

STATUS
TOTAL TNCRs SUBMITTED - The total number of TNCR requests for modification that have been submitted in 9-1-1
PENDING STATUS - TNCRs assigned this status are requests which have been reviewed by the 9-1-1 Database Service Provider Data Analyst, and are pending investigation whether the request is valid or invalid, and/or whether the request requires additional information to validate.
REFERRED STATUS - TNCRs assigned this status are requests which have been reviewed by the 9-1-1 Database Service Provider Data Analyst, and the request requires additional information to validate. The West Safety Services Data Analysts assigns this status to a TNCR and the request is referred to the telephone service providers for further research.
TOTAL UNOPENED TNCR RECORDS STATUS - The request is submitted by Akimeka on behalf the PSAP; however, processing by the 9-1-1 Database Service Provider Data Analyst has not begun.

September 1, 2017 - September 30, 2017

PHASE III RDC GIS Address Points

The Phase III effort is taking place in conjunction with the Phase II effort in the MSAG. The Phase III project includes the collection and creation of new Address Points in the GIS to be used as a critical source of information in the Street Centerline correction and synchronization process with the MSAG data. Furthermore, the Address Points serve as a vital piece of information in the identification of the 9-1-1 caller's location and synchronization with the ALI database. Much of this Phase III effort is dependent on the availability of information.

PHASE III RDC GIS Address Points					
Community	Address Points at start of project 7/1/17	Address Points Added This Month	Total Address Points That Have Been Added	Status	Date

September 1, 2017 - September 30, 2017

SPECTRUM (CHARTER) 9-1-1 VOIP DATABASE VERIFICATION PROJECT – SEPTEMBER 2017

Akimeka received the Automatic Location Identification (ALI) records from Spectrum (formally known as Charter Communications) which is the predominant Voice over Internet Protocol (VoIP) provider in the State of Hawaii. As Akimeka has access to these ALI Records, Akimeka is researching and verifying the VoIP records against an MSAG valid address and the GIS data. This research is a validation of the ALI Record to ensure that the location as provided by the VoIP provider matches the GIS Information utilized by the Public Safety Agencies within their specific County 9-1-1 Service Area. This validation reduces the potential of address or location dispute during a 9-1-1 call.

The analysis of the database records indicates that there are invalid MSAG addresses utilized by the VoIP Provider. These records are being identified, and will be sent back to Spectrum for corrective action.

*Spectrum (Charter) 9-1-1 VoIP Database Verification Project					
PSAP	TOTAL RECORDS SUBMITTED BY SPECTRUM (A)	TOTAL RECORDS MATCHING & VERIFIED WITH 911 DATABASES (B)	TOTAL RECORDS NOT MATCHING	NON MATCHING RECORDS CORRECTED BY AKIMEKA (C)	PERCENT COMPLETED
HAWAII County	22,044	21,638 (98%)	406	288	70.94%

9/1/2017	Address Points, Street Centerlines, Common Places, Fire Response Areas, Medic Response Areas, Ocean Safety Response Areas, AMR Response Areas to AMR for TriTech CAD

MAPFLEX SYSTEM

During the month of September 2017, the MapFlex system received updates manually as a result of MapFlex having several issues pertaining to the automated upload processes.

Considering that the MapFlex initiative being provided by Hawaiian Telecom and sub-contractor, West, was implemented across the State of Hawaii, in the below narrative there is some information pertaining to all of the Hawaiian Islands. For a record of historical information regarding the MapFlex system, please see MSRs during the 2015 and 2016 years.

1. Akimeka delivered GIS data to the MapFlex system on the following dates in September 2017
 - a. **Hawaii County** – September 12th, 2017 and September 26th, 2017
 - b. **Maui County** – September 13th, 2017 and September 27th, 2017
 - c. **Kauai County** – September 14th, 2017 and September 28th, 2017
 - d. **Honolulu** – September 1st, 2017, September 15th, 2017 and September 29th, 2017

Oahu Civilian E9-1-1 Status Report

September 1, 2017 - September 30, 2017

MAPFLEX ISSUES

Below is a detailed list of issues regarding the MapFlex systems throughout the State of Hawaii.

DATE	ISSUE	DESCRIPTION	STATUS
7/24/2016	Automatic Uploads Malfunctioning	It was identified that the Automatic uploads were creating issues within the MapFlex systems, where locators were not being published, etc. as a result of a scripting error at West. Manual uploads have been taking place of the GIS as necessary and agreed by all PSAPs.	Pending, however as of April 2017, West/HT has decided to implement a process to upload data the following week after GIS uploads (manually)
7/24/2016	Blank MapFlex Screen	The MapFlex screen went blank and there was no mapping capability, similar to what had occurred with Maui PD. Resulted from West's automatic update script. All of the PSAPs agreed to hold off on all GIS updates in MapFlex until West has resolved the issue.	Resolved (Nov 2016) There have been no reported blank screens
8/2016	Wireless Addresses	MapFlex system began displaying wireless information incorrectly. MapFlex system is doing a reverse query for additional information in the GIS and this is overriding the ALI information with the closest address in the GIS.	Partially Resolved (Nov 2016) The overriding ALI with updated Lat/Longs from the GIS is still occurring
8/2016	Text-to-911 Icons	Icons for text calls have stopped displaying. Previously when calls came in as a text call, there would be an icon displaying "TEXT" where the call was plotted.	Resolved (Nov 2016)
11/2016	Phase I Display	Wireless Phase I calls plotting at centroid of coverage area and landing in the ocean. After installation of new MapFlex version to correct other issues, the configurations for Wireless Phase I were not set up properly by West, in which the mapping did not point to the correct information in MapFlex.	Resolved (Dec 2016) According to PSAPs, it's not fully resolved. The icon of the tower still doesn't plot for Phase I.
11/2016	Wireless Confidence	Sprint calls coming across with unusually high confidence. Coordination is taking place with Sprint and West. West provides the PDE services for Sprint.	Pending
1/18/2017	RDC MapFlex	During a meeting between Akimeka and RDC, it was identified that HPD GIS data was contained within the RDC MapFlex and was missing RDC's data. Due to the proprietary nature of the GIS data provided by Akimeka for the civilian PSAP's mapping systems and the confidential information contained to support HPD operations, it was concerning. Actions were taken to request West to stop this and to pull RDC's archive data. West has since replied that they never knew RDC was military and functioned separately from the civilian PSAPs. HPD, RDC, and Akimeka have taken corrective actions to construct GIS data that will be used as a baseline for the RDC and to remove sensitive information supplied for the RDC MapFlex.	Pending – Akimeka notified West that they had data ready on June 28, 2017. Akimeka was given notice that they could proceed on July 7 th . The updated GIS data was loaded into the RDC MapFlex on July 24 and 25.
3/22/2017	ArcGIS Address Locator	The locators in MapFlex have a configurations which does not include ESNs. A reported issue has occurred with the Sheraton in Waikiki. The address locator does not differentiate between the Sheraton hotel and the surf break and plots on the surf break. The bigger issue is that this same	A new SP 5.4 update by West is aimed to correct this issue.

Oahu Civilian E9-1-1 Status Report

September 1, 2017 - September 30, 2017

		issue will occur with complexes that have same primary address.	
5/17/2017	VoIP Calls Plotting Incorrectly	Recognized in late April and early May 2017, the PSAPs have been receiving several VoIP calls which are plotting in the incorrect locations. After further research it was determined that it is because MapFlex is configured to plot the received Lat/Long. The problem is that these are not always maintained properly and that ideally the system should first choose to match with the GIS data based on the provided address. During the September 20, 2017 PSAP conference call, HT relayed there was confirmation that the Time Warner records were in fact passing through the West FMCC.	West is currently researching their configurations (May - June 2017). Aside from the MapFlex, Akimeka is working with Spectrum (previously Time Warner) to correct their Lat/Longs on a mass scale Discussion has taken place on a temporary solution by suppressing XY in ALI.
5/17/2017	Landline Calls Producing X/Y on calls	It was determined that for normal landline calls, the X/Y coordinates are being sent. The PSAPs have asked where these are being generated and why would they be sent for landline calls.	West is looking into this (May - June 2017)

STREET UTILITY CHECK

This is an ongoing project to correct the errors identified. A comparison of the raw CAD generated report from the Street Check Utility was performed between the Street Centerline GIS data on August 18, 2017 and September 15, 2017.

Street Utility Check				
	First Report 06/01/13	8/18/2017	9/15/2017	Improvements/Corrections
Total Number of GIS Records	26,602	30,729	30,763	Increased by 34 records
Errors Identified				
Zero Errors	5,112	2	6	Increased by 4 errors
Low > High Errors	3	0	0	No change
Mixed Parity Errors	1	0	1	Increased by 1 error
Changed Parity Errors	105	0	0	No change
Address Gap Errors	2,629	23	2	Decreased by 21 errors
Address Overlap Errors	423	8	2	Decreased by 6 errors
Flipped Link Errors	1,030	37	14	Decreased by 23 errors
Total Errors	9,303	70	25	Decreased by 45 errors

In addition to Akimeka's internal validation tools, Akimeka will continue to utilize the various CAD reports to further identify and correct the multitude of discrepancies in the GIS data. This is an ongoing and routine process which Akimeka has been using to improve the accuracy of the GIS data for Public Safety.

As a result of the GIS efforts within the military jurisdictional areas covered primarily by the RDC, the GIS data is undergoing several changes within the bases which will cause a fluctuation in the Street Check results, which is to be expected. Any discrepancies that are identified will be corrected in the following GIS deliverable.

Oahu Civilian E9-1-1 Status Report

September 1, 2017 - September 30, 2017

TRITECH CAD ADDRESS POINT PROJECT

During the month of May 2017, HFD and Akimeka worked closely to begin testing whether utilizing Address Points in their system would overall improve the 911 operation. Currently the HPD Common Place point data is loaded into the CAD system as a locatable layer and there are display Address Points used for visual only.

The purpose of this project is to test a new load of Address Points which contains the Common Place locations and also including all residential addresses which Akimeka has been correcting/adding over the previous 5 years. The new “combined” Address Points were first delivered to HFD on May 12th. Since that time, HFD and Akimeka has performed various updates to allow for them to operate best in the TriTech CAD. The most recent update included adding the apartment information into the Location Name field so that it would provide a dropdown list for the call taker to choose from.

The updates are still being tested and it is expected that there will continue to be additional iterations between HFD and Akimeka until the best possible dataset is utilized.

Throughout September 2017, there were no issues reported.

SPEED LIMIT UPDATES

Beginning in April 2017, and now that the Street Centerline data has achieved not only an above 98% synchronization rating but also a high degree of accuracy in the spatial accuracy, a new project to correct speed limits has begun. The project is beginning in Waimanalo and continuing in a counter-clockwise pattern around the island of Oahu. The initial focus is on Highways, Freeways, and other major roads, but also not limited to additional corrections, especially those which are immediately identified to positively impact vehicle routing, etc.

All updates are shared directly with the PSAPs and the agency most affected (positively) is HFD since they actively use vehicle routing and this will assist in better CAD unit recommendations. During each GIS deliverable, a list of updates are being provided.

1. During April 2017, Akimeka corrected seven (7) highway streets in Waimanalo
 - a. In addition, other segments of Kalanianaʻole Hwy were verified in the process throughout Waimanalo
2. During May 2017, Akimeka corrected seventy (70) highway, freeway, and other major road segments throughout Kailua and a small portion of Kaneohe.
3. During June 2017, Akimeka corrected an additional 22 major streets in Kailua, 120 in Kaneohe, and 1,292 city streets from the default of 30 MPH to 25 MPH.
4. During July 2017, Akimeka corrected an additional 21 major streets/highways, and an additional 1,091 city streets were updated.
5. During August 2017, Akimeka corrected an additional 154 street segments across Kahaluu and Kaaawa.
6. During September 2017, Akimeka corrected an additional 157 segments throughout Kaaawa, Punaluu, and Hauula.

Oahu Civilian E9-1-1 Status Report

September 1, 2017 - September 30, 2017

AMR-H

The American Medical Response Hawaii (AMR-H) Project is a joint venture by the Honolulu Emergency Services Department (HESD) to provide accurate address and location information to its other public safety agencies. This project is to ensure AMR-H is utilizing the same address and location information as the other HESD public safety agencies, and to ensure compliance with National 9-1-1 directives such as the FCC Docket 15-9 regarding location accuracy. The intent is to provide the same accurate location information to all the HESD public safety response agencies to help reduce response times to the 9-1-1 caller.

AMERICAN MEDICAL RESPONSE (AMR) HAWAII PROJECT

During the month of June 2017, Akimeka began preparing the GIS data for the AMR TriTech CAD System.

1. Akimeka prepared the GIS data to meet the system requirements of the TriTech CAD system in June 2017.
 - a. In addition, Akimeka created the AMR Response Area for the entire island of Oahu to be used as the primary responding information in the CAD recommendations.
2. On June 23, 2017, Akimeka prepared and delivered the first initial GIS deliverable to AMR to be used for the initial load. Akimeka will be on standby for any additional changes. Once an agreed upon dataset is confirmed, Akimeka will be able to continue with an “ongoing deliverable phase” where updates are provided on a scheduled basis.
3. On June 30, 2017, Akimeka followed up with AMR to ensure the data met their requirements.
 - a. AMR responded that they have not had the opportunity to download and review the data but is expected to during the week of July 10th, 2017.
4. Throughout September 2017, the deliverables continued as scheduled and there were no reported issues.
5. On September 15, Akimeka received notification that the data will soon be put into production and there was approval from the local users to move to PROD.
 - a. During the September 29, 2017 GIS deliverable, Akimeka notified everyone that now that data has been put into production we will be moving to a once-per-month deliverable schedule

RDC: THE REGIONAL DISPATCH CENTER

The Regional Dispatch Center (RDC) Pearl Harbor, HI. Project is a joint venture by the Honolulu Police Department (HPD) to assist with providing accurate address and location information to the RDC. This accurate and common addressing methodology is to primarily assist the on-base residential community, and the MWR facilities receiving their Communication Services from non-government provided communication companies. This will methodology will ensure compliance with national 9-1-1 directives such as the FCC Docket 15-9, and to reduce the response time on mutual aid calls. The intent is to provide more accurate location information build on a common platform for the two Primary PSAPs on Oahu providing public safety response, and to reduce response times while responding to 9-1-1 callers.

Oahu Civilian E9-1-1 Status Report

September 1, 2017 - September 30, 2017

RDC MAPFLEX PROJECT

During the month of September 2017, there were some significant project schedules approved, geared to further increase the accuracy of the GIS data within the RDC MapFlex system. To date, the synchronization efforts have been on track and steadily increasing the accuracy and consistency of the data.

1. On September 1, 2017, the HPD, RDC, and Akimeka held a meeting on the RDC's Database Synchronization project and to discuss the proposed phases on implementation.
 - a. At a glance, there were a total of 7 phases recommended, each of which were aimed to systematically improve the quality of the GIS, MSAG, and ALI data for the RDC.
 - b. The phases spanned from the initial analysis (conducted in May) to data collection efforts, to achieving the desired minimum 98% match rate among the databases.
 - c. The meeting was very productive and the project schedule was subsequently approved by all in attendance.
 - d. As each of the phases are completed, a status briefing will be provided to the RDC and HPD leadership. The work effort throughout each phase will continue to be tracked and reported via the MSR.
 - i. If there are any needed changes to the project schedule, the RDC, HPD, and Akimeka will coordinate for approvals.
2. On September 15, 2017, a meeting regarding the RDC Common Places took place with HPD and Akimeka.
 - a. The agenda for the meeting was to review with HPD how to best import the Common Place data into the GIS so that it did not disrupt the operational components in their CAD and Mapping Systems.
 - b. The goal was to identify the best strategy so that the RDC, HPD, and all secondary PSAPs could receive the same data in all systems, therefore supporting interoperability, but without causing any issues in any one system.
 - c. Akimeka proposed an import strategy which mirrored the community sweep pattern from the phased effort regarding the synchronization. This would not only allow for a gradual implementation, but also to give everyone a schedule so they were aware what changes were taking place and where so that testing could be done.
 - d. The recommendation was approved during the meeting.

HONOLULU EMS CENSUS REPORT 2017

During the month of August, per special request from Honolulu EMS and approved by HPD, a report was completed which provided a list of all current addresses with associated census tracts.

1. On August 29, 2017, Akimeka ran the report and submitted to Honolulu EMS for acceptance.
2. During the month of September 2017, Akimeka will coordinate with EMS to ensure the report will work for them. Any changes needed will subsequently take place as needed.

Oahu Civilian E9-1-1 Status Report

September 1, 2017 - September 30, 2017

HONOLULU FIRE DEPARTMENT MSAG EXTRACT

During the month of August, a special request was made by HFD for a soft copy, digital extract of the MSAG to be converted to hard copy PDF and printed for dispatch use. HPD had approved the request the same day.

1. Included in the request was for the Fire Response Area designations to be added so HFD can see which streets and ranges are associated with a given station.
2. Akimeka informed everyone that this can certainly be done and had recommended we wait until September 1, 2017, so the most recent MSAG extract from the Telco can be utilized.
3. Within the first few day of September 2017, Akimeka had received the latest MSAG and began populating with the requested information from HFD.
4. On September 8, 2017, Akimeka sent the MSAG extract with HFD updates to HFD.
